

# Transportation Management

Our clients benefit from visibility, real-time data, and the type of historical reporting that leads to better forecasting and planning.

Our technology includes milestone tracking and oversight for all modes of transportation, including import and export activities, allowing for optimal management of a full lifecycle logistics program.

# Intelligent Transportation Management.

Our Transportation Management System integrates proprietary, sophisticated TMS applications, an extensive carrier network and experienced logistics professionals with insight into the global, regional and local transportation markets. Our holistic approach creates a true partnership using a combination of strategic planning, execution, technology, and managed services, delivering exceptional value and providing visibility and actionable intelligence into operations.

Choice Logistics' non-asset, carrier-agnostic, global platform connects your supply chain to an optimal network of carriers — ours, yours, your customers, or a combination — to meet your on-demand, final mile, 2hr/4hr, rush, same business day, scheduled, next business day or day-definite requirements.

Our clients benefit from:

- Reduced Transportation Costs
- Greater Visibility to Cost Savings Opportunities
- Improved Delivery Performance
- Intelligent Decision Support
- Better Visibility Across their Supply Chains
